

Compliance Support Services

About us

Risk Crew are an elite London-based, information security governance, risk, compliance and testing consultancy.

Experts in the cyber threat landscape, we excel in creating cost-effective controls and processes to meet these threats and comply with legislation, regulation and best commercial practices.

We put skin in the game and provide a 100% satisfaction guarantee on all our services.

***“ By failing to prepare
you are preparing to
fail.***

Benjamin Franklin

What is it?

ISO-27001 is short for ISO 27001-: 2013 which is the standard created by the International Organization for Standardization (ISO) for implementing an Information Security Management System (ISMS) to protect business information assets.

Quite simply, it's a framework for managing information security risks which can be used by any business regardless of industry, size or location. It requires the design and integration of security controls into existing business processes to ensure the protection of sensitive data. This is what information security is all about.

Risk Crew can deliver any one or combination of the following four cost-effective service options to help your organisation become ISO 27001 compliant.

Discover

Assist

Implement

Maintain

Discover

To help you get started in complying with the ISO-27001 standard, our “Discover” service provides the following deliverables:

- We will conduct a comprehensive ISO 27001 Compliance “Gap Assessment” to identify the “gaps” between your current operations and those recommended by the standard.
- We will create a Compliance Activities Roadmap detailing the specific remedial actions required for compliance.
- We will conduct an interactive workshop with your stakeholders to ensure their understanding.

This simple service is designed to result in a solid understanding of the standard and what’s required from your business to comply.

Assist

Need a little more help? Our “Assist” service offers all of the deliverables from our “Discover” service plus:

- We will identify, Locate & Classify Information Assets and create Data Classification & Marking Schemes and an Information Asset Register:
- We will conduct an Information Threat & Risk Assessment, create an Risk Treatment Plan then conduct Risk Strategy Workshop with Stakeholders to Confirm Organisation’s Risk Appetite and create Template ISMS Documentation for your Customisation
- After you have implemented the recommended controls, we will then conduct a mock audit to ensure certification readiness.

This service provides the framework essential for compliance and is ideal for organisations that have operational resources but specifically lack in-house information security risk management expertise.

Implement

Need the full belt and braces? Our “Implement” service offers all the deliverables from both our Discover and Assist services outlined above in addition to the following:

- We will create a fully customised ISMS, SoA and planning and policy documentation in addition to specific control recommendations for implementation in the business
- We will conduct Network & Website Security Vulnerability Assessment Scanning and Network & Website Security Penetration Testing of your systems, implement an Information Security Awareness Training Program to your staff and conduct an ISMS Workshop with Stakeholders to Ensure Understanding, Roles & Responsibilities:

This comprehensive service provides everything you need for your ISO-27001 compliance short of implementing the policies and the procurement of any controls needed and is designed for organisations looking for a cost-effective, turn-key solution. *This popular service also comes with our 100% guarantee that you will pass your compliance audit. Why? We put skin in the game. That’s why. Who else does that?*

Maintain

If your organisation is currently ISO 27001 compliant then you know that once you get compliant the challenge is to - stay compliant. Risk Crew can help you meet this challenge with a variety of support services from delivering on-going requirements such as conducting risk assessments, scanning, testing and delivering information security awareness training to providing continuous ad-hoc advice and assistance to answer questions, clarify requirements and ensure you stay the course of compliance.

Give us a call and we can discuss and design something to meet your specific needs.
